

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1 (currently amended): A coating formulation for a substrate having abstractable hydrogen radicals, the formulation including a hydrophilic polymeric component comprising at least two polymeric species of differing molecular weights, an unsaturated hydrophilic monomer capable of free-radical polymerisation in the presence of a radical and a UV activatable compound capable of abstracting hydrogen radicals from the surface to be coated and from a polymeric species of the hydrophilic polymeric component so as to initiate and promote the cross-linkage of the monomer to the surface and of the monomer or a propagating monomer chain to a polymeric species of the polymeric component, and a suitable solvent, and wherein said formulation is coated on an implantable medical device.

Claim 2 (currently amended): A coating formulation as claimed in claim 1, wherein the unsaturated hydrophilic monomer has at least two acrylate functional groups.

Claim 3 (currently amended): A coating formulation as claimed in claim 1 and 2, wherein the at least two polymeric species include different functional groups.

Claim 4 (currently amended): A coating formulation as claimed in claim 1 or claim 2, wherein the at least two polymeric species comprise chemically different polymers.

Claim 5 (currently amended): A coating formulation as claimed in any one of the preceding claims claim 2, wherein the at least two polymeric species comprise straight chain or branched chain polymers.

Claim 6 (currently amended): A coating formulation as claimed in any one of the preceding claims claim 1, wherein at least one polymeric species comprises a relatively lower molecular weight polymer and at least one polymeric species comprises a relatively higher molecular weight polymer.

Claim 7 (currently amended): A coating formulation as claimed in claim 6, wherein the relatively lower molecular weight polymer has molecular weight in the range of

40kDa to 100kDa and the relatively higher molecular weight polymer has a molecular weight in the range of 100kDa to 1500kDa.

Claim 8 (currently amended): A coating formulation as ~~claimed~~ in claim 6, ~~or 7~~ wherein the weight ratio of the lower molecular weight polymer to the higher molecular weight polymer is at least about 1-3[[[:]]] to at least about 1-2.

Claim 9 (currently amended): A coating formulation as ~~claimed~~ in ~~any one of the preceding claims~~ claim 1, wherein the UV activatable compound is selected from any of a group that use a hydrogen abstraction mechanism to initiate polymerisation, including aryl ketones such as benzophenone, xanthone and dichlorobenzophenone.

Claim 10 (currently amended): A coating formulation as ~~claimed~~ in claim 9, wherein the UV activatable compound is benzophenone.

Claim 11 (currently amended): A coating formulation as ~~claimed~~ in any one of the preceding claims, wherein the monomer for the coating formulation is acrylic acid, which has the functionality to react both with the substrate and with the polymeric specie on initiation of the hydrogen abstraction mechanism by the UV activatable compound.

Claim 12 (currently amended): A coating mixture for a biomedical device which has labile hydrogen radicals available for abstraction, the mixture comprising acrylic acid monomer, at least two hydrophilic polymeric species of differing molecular weight and a UV activatable compound capable of abstracting labile hydrogen radicals from the surface to be coated and from at least one of the polymeric species so that on activation of the UV activatable compound, the components bond to the surface of the biomedical device to coat it with a hydrophilic, interpenetrating matrix of polymers, and wherein said formulation is coated on an implantable medical device.

Claim 13 (currently amended): A coating formulation as ~~claimed~~ in claim 12, wherein the UV activatable compound comprises benzophenone.

Claim 14 (currently amended): A coating formulation as ~~claimed~~ in claim 12 or 13 wherein the polymeric species comprise polyvinylpyrrolidone.
